

Habilitando customer profile e associando a minha chave de criptografia.

O canal de e-mail (atendimento@jrmarques.net) foi configurado no SES e vinculado diretamente ao fluxo de atendimento criado, permitindo que cada e-mail recebido inicie a lógica de automação instantaneamente

Criei o fluxo 03-connect-email-ses-custprofile-ccp. Este fluxo lógico realiza a triagem automática: busca o perfil existente; se não encontrar, cria um novo perfil com base no e-mail do remetente; e associa o contato ao perfil identificado.

Edit email address

Edit this email address and optionally associate it with a flow. If you do not associate the email address to a flow it can only be used for sending email messages.

Só pra exibir que não tem nenhum Customer Profile nesta instância, AINDA!

Enviei email das minhas duas cx de email.

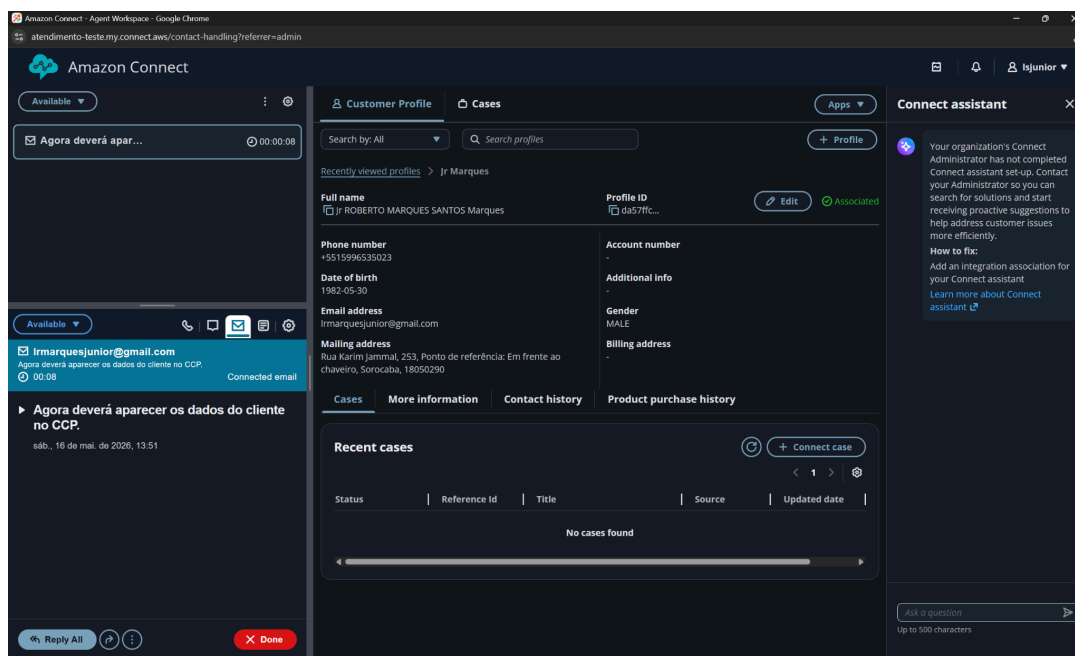

Email recepcionado cai no CCP, mas ainda não tem nenhum perfil criado!

1 Perfil Criado e associado (Aqui já criou a “criança” !)

1 Perfil criado e pendente de associação

Quando enviado pela segunda vez... já aparecem os dados do cliente. Nada de lambda ainda... só tem contato gravado com email. Depois vamos progredir e já de início pegar os dados básicos e:

- se identificado: atualizar dados do cliente
- se novo: criar enriquecido
